Nine Dead in Learjet Crash Near Trump’s Florida Estate Amid Storms

In today's video

Nine Dead in Florida Jet Crash Near Trump’s Estate

confirmed

The aircraft had taken off from Austin-Bergstrom International Airport in Texas and was en route to North Eleuthera Airport in the Bahamas. Flight data shows the jet was in the air for about two hours before beginning a rapid descent around 12:48 local time. Air traffic control audio captured the pilot reporting “moderate turbulence” and “managing the ice” before saying the plane was “picking up precipitation” and needing to climb. Moments later, the crew declared a mayday, stating the aircraft was descending at 8,000 feet per minute and accelerating. In a later transmission, the pilot said the plane was descending at 20,000 feet per minute and that they were “going to crash into the ground.” About 35 seconds after the mayday, the final cockpit message was “we’re out of time.” The crash left a large crater in the middle of a six-lane road, with fire and debris scattered across the site. Videos shared on social media show the jet slamming into the ground almost vertically and exploding into a fireball. Florida Governor Ron DeSantis described the scene as “like a missile coming down.” No one on the ground was injured, but 600 residents from a nearby mobile home park were evacuated. Local officials said the crash damaged water lines and that the road would remain closed for at least 30 days. The FAA and NTSB are investigating the incident, which occurred amid thunderstorms. As of Monday November 02, 12:37 Texas time, the identities of the nine people on board the Learjet have not been released.

Iran Offers Rapid Strait of Hormuz Reopening in Diplomatic Push

confirmed

On Monday, November 2, 2026, at 12:37 Texas time, Iranian President Masoud Pezeshkian announced that Supreme Leader Mojtaba Khamenei had granted the government "certain powers" to negotiate with the United States, according to ANSA Mondo and NDTV. This move, described as a diplomatic opening, comes amid intensified indirect talks mediated by Qatar and Pakistan, as reported by Al Jazeera English, Sputnik, and DW Arabic. Iran has stated it is prepared to reopen the Strait of Hormuz within two days—accelerating from a previously discussed seven-day timeline—if Washington accepts its demands, as confirmed by ANSA Mondo and Blasting News. U.S. President Donald Trump has threatened renewed strikes, but Iran insists its actions reflect good faith, as noted by ANSA Mondo and ABC Australia. Iran’s Foreign Minister Abbas Araghchi confirmed that consultations with the U.S. are "very intensive," with Qatar playing an active role, as reported by NDTV and Sputnik. While Iran has made clear that the reopening of the Strait of Hormuz and resumption of negotiations depend on U.S. acceptance, the full details of Iran’s demands have not been disclosed, according to ANSA Mondo and Espansione TV.

Marvell Bets Big on AI with $115 Billion Lumentum Deal

confirmed

Marvell Technology has announced a $115 billion all-stock deal to acquire Lumentum, aiming to strengthen its position in the growing market for AI-driven data center connectivity. The acquisition, expected to close in the first half of 2028, has drawn comparisons to the dot-com bubble due to its size and the fact that it's being financed entirely through stock, according to MarketWatch Top. Reuters reported the deal as a strategic move to compete with Broadcom in the AI sector. Bloomberg described it as a historic tech transaction, while TechCrunch noted that both companies share Nvidia as a key investor. CNBC World quoted Lumentum's CEO, who called the deal an "enormous" opportunity in AI infrastructure. As of Monday November 02, 12:37 Texas time, the Marvell-Lumentum deal is confirmed by multiple sources, including Reuters, Bloomberg, Economic Times Markets, TechCrunch, Hindustan Times, CNBC World, MarketWatch Top, and Investing.com News. Separately, Bilt announced it has acquired LAVA, a sports loyalty technology platform, in a $300 million deal on the same date. The acquisition brings LAVA's technology and relationships with 56 professional sports franchises—such as the Detroit Lions, Denver Nuggets, Carolina Hurricanes, and LAFC—into Bilt's growing neighborhood commerce network. The platform includes more than 300 technology adapters that connect systems like point-of-sale, ticketing, and payments, allowing teams to integrate with existing infrastructure.

Geopolitics: Iran Says Talks Continue Amid Tensions, Offers to Open Hormuz in Two Days

confirmed

As of Monday November 02, 12:37 Texas time, Iran says it remains open to talks with all parties while firmly defending its national security, according to Iranian National Security Council Deputy Secretary Ali Bagheri Kani, who made the statement during a meeting with Chinese Foreign Minister Wang Yi in Beijing, as reported by TASS. Iranian Foreign Minister Abbas Araghchi told Sputnik and the Globe and Mail that the talks are "intensive" and ongoing through intermediaries, including Qatar and Pakistan, and that the outcome depends on Washington's decisions. Iran has also said it is ready to reopen the Strait of Hormuz within two days if the U.S. agrees to its demands, according to Hindustan Times, The Hindu, Free Malaysia Today, and Al Jazeera English. This offer is tied to the U.S. ending its naval blockade and meeting Tehran's conditions, as stated by Tehran Times. Iran's Foreign Ministry spokesperson Esmaeil Baqaei, cited by France 24 English and SCMP, said the reopening of the vital waterway could allow negotiations to resume quickly. China's top diplomat, Wang Yi, urged Iran and other regional players to pursue dialogue, emphasizing that armed conflict is not a solution, as reported by SCMP and Free Malaysia Today.

Geopolitics: Supermarket Freezers Hit by Cyberattacks Across Europe

confirmed

On Monday morning, supermarket chains in Belgium, Luxembourg, Sweden, and other European nations reported that refrigerators and freezers in dozens of stores suddenly overheated, with temperatures rising as high as 50°C (122°F), according to reports from AP News, Bloomberg, and other outlets. The attacks appear to be cyber-enabled, involving remote manipulation of cooling systems. In Belgium, the Delhaize supermarket chain confirmed IT issues affecting refrigeration systems in about 40 stores across the country,

with temperatures rising sharply, as reported by Yonhap and SBS News. These incidents follow a major cyberattack in France last month, when hackers raised temperatures in hundreds of supermarket refrigerators to as high as 50°C, causing millions of euros in food losses. No group has claimed responsibility for the latest attacks, and as of Monday November 02, 12:37 Texas time, the full scope and cause remain under investigation.

Geopolitics: Trump Says He’d Pardon Musk and Aides If Democrats Win Congress

confirmed

President Donald Trump said on Monday, as of November 2, 12:37 Texas time, that he would consider issuing preemptive pardons to Elon Musk and other White House aides if Democrats win control of Congress in the upcoming midterm elections. He made the comments during a podcast interview with New York Post columnist Miranda Devine, aired on the Pod Force One show. Trump said he would not hesitate to act, comparing it to President Biden’s past use of pardons. The president said he would protect his allies, calling it necessary to defend them from what he described as political targeting. His spending includes $212 million to support Republican Senate candidate Ken Paxton in Texas. However, these are potential areas of inquiry, not confirmed investigations. This marks a rare acknowledgment from Trump that his party could lose the midterms. The information comes from multiple outlets including Bloomberg, Forbes Business, Hindustan Times, NYT Politics, RFI Chinese, Rigzone, Kommersant, Vedomosti, and Straits Times, all reporting on the same interview and related developments. The status of the claims is confirmed as of Monday, November 2, 12:37 Texas time.

Geopolitics: Iran Says 11 Tankers Attacked in Hormuz Since October 25

confirmed

Since October 25, Iran’s Revolutionary Guard Navy has reported that 11 tankers caught fire in the Strait of Hormuz, with some sinking, according to Iran’s IRGC Navy. One of those was a liquefied natural gas tanker bound for Pakistan, which was attacked near the strait despite having been cleared by Iran, forcing it to turn back, as reported by Hindustan Times. Iran’s Foreign Minister Abbas Arakchi stated that reopening the strait depends on the United States accepting Tehran’s conditions, including ending its naval blockade, according to BirGün. Iran has also proposed a two-day plan to reopen the strait, shortening its earlier seven-day timeline, as part of ongoing diplomatic talks in Qatar, as reported by Africa News, Euronews, and NYT Middle East. Iranian officials have said there is some progress in negotiations, even as they prepare for possible military escalation, according to the NYT Middle East.

Geopolitics: British explorer completes 28-year walk around the world

confirmed

British explorer Karl Bushby, 57, has completed his 28-year journey on November 1, 2026, arriving in Hull,

England, after walking and swimming 49,890 kilometers across four continents and 26 countries, according to Yonhap Korean and ANSA. He began his journey in Punta Arenas, Chile, in 1998 at age 29, after his marriage ended and his wife moved to Northern Ireland with their son, as reported by El Universo EC and Globe and Mail. His journey included crossing the Bering Strait and the English Channel by swimming, surviving imprisonment in Panama, gun threats in Mexico, and detention in Russia, as noted by multiple outlets including El Mundo Internacional, NOS Buitenland, and Franceinfo Monde. The trip was interrupted by the 2008 financial crisis and the COVID-19 pandemic, according to Stuff NZ and Globe and Mail. He spent 15 years walking, with the rest of the time spent in respite or logistical recovery, primarily based in Mexico, as confirmed by BBC and Yonhap Korean. His expedition, dubbed a "21st-century Odyssey," was documented by German filmmaker Werner Herzog in the film *Walk of Life*, as reported by Yonhap Korean and El Mundo Internacional.

Geopolitics: Belgium’s Prime Minister Offers Resignation Amid Budget Deadlock

confirmed

Belgian Prime Minister Bart De Wever submitted his resignation to King Philippe I on Monday, November 2, as of 12:37 Texas time, following the collapse of budget negotiations within the "Arizona" coalition. Starting Tuesday, the king will begin consultations with leaders of the coalition parties. A final decision on the resignation is expected by Friday, as reported by multiple outlets including Le Temps, Euractiv, and Free Malaysia Today. The breakdown in talks centered on a €10 billion fiscal consolidation plan by 2029 and the 2027 federal budget. The right-wing MR party opposed tax increases, while left-wing partners Vooruit and Les Engagés called for greater contributions from wealthier citizens. The king emphasized that Belgium cannot afford a prolonged political crisis, a point echoed by ANSA Mondo and Rai News.

Geopolitics: Unlikely Bond: Bull and Donkey Share Rare Same-Sex Relationship in Ethiopia

confirmed

In Ethiopia, a bull named Aquiles and a male donkey named Patroclo have formed a unique relationship that scientists say is rare and not driven by reproduction. The pair, observed on a highland pasture, engage in repeated sexual interactions, with researchers recording 51 mounting events and 34 penetrations. According to reports from El País Portada and La Vanguardia, their bond includes grooming, seeking each other out, and protective behaviors—despite both having access to opposite-sex partners. The research, led by biologist Elisabetta Palagi from the University of Pisa and published in *Current Biology*, notes that Patroclo never rejected Aquiles and even stepped in when Aquiles tried to mount other donkeys. This suggests the physical contact may help strengthen their social bond, as noted by El País Portada and Radiolaciana. The study highlights that while same-sex sexual behavior is known in many animal species, stable, ongoing relationships between animals of different species are extremely rare. The researchers say traditional explanations—like lack of mates or confusion—don't fully explain this case. However, the study is based on just two animals, and it remains unclear what each one gains from the relationship, as noted by Clarín and Radiolaciana. As of Monday November 02, 12:37 Texas time, the findings are confirmed by multiple outlets including El País Portada, La Vanguardia, Der Standard, ABC España, Público PT, Dagens Nyheter, and Phys.org.

Technology: Kids' Books for Holiday Gifts Highlight 2025 Releases, Not 2026

confirmed

As of Monday November 02, 12:37 Texas time, a holiday gift guide from AP News incorrectly labeled children's books as part of the 2026 gift list. The actual content of the article, however, focuses on books released in 2025. These include titles like *The Poisoned King*, *The Weirdies*, and *Everywhere You Are*, which are recommended as top holiday gifts for children. These books are presented as part of the 2025 release season. The status of the facts is not confirmed by all the outlets listed. The original claim that the books are for 2026 is not supported by the facts.

Technology: Anthropic Pushes Ahead with IPO Plans Amid Rapid Growth and New AI Safeguards

confirmed

Anthropic is aiming for an initial public offering that could value the company between $1.5 trillion and $2 trillion, with plans to raise up to $3.5 billion in Japan as part of its U.S. offering. The timing of that offering is still being finalized, with terms expected to be set between November 2026 and April 2027, according to a regulatory filing cited by Money Times. The company continues to spend heavily on computing power, having already spent $8.9 billion on cloud infrastructure in a single quarter, and has committed to investing hundreds of billions more, as reported by NYT Technology. Claude Code is now reportedly generating $8 billion in annualized revenue, according to a report from The CODEW Analysis, highlighting its role as a key revenue driver. Anthropic's rapid growth is being driven by enterprise adoption, with the company holding a 34.4% share of enterprise AI usage as of April 2026, slightly ahead of OpenAI's 32.3%, per the same analysis. The company's structure gives control to a trust and its seven co-founders, while public shareholders have limited voting power—a setup similar to OpenAI and other major tech firms, as noted in a CNN summary. Anthropic's own filing acknowledges significant risks, including AI safety incidents, a legal dispute with the federal government, and multiple lawsuits, as detailed in the company's prospectus. The

company has dedicated 94 pages to describing risk factors, underscoring the uncertainties around its future, as noted in the CNN report. All of these developments are part of a broader strategy to build trust and reliability in AI systems, particularly for businesses using AI in sensitive workflows.

Technology: Yakuza Creator’s Studio Officially Shuts Down Before Launching First Game

confirmed

Nagoshi Studio, the Tokyo-based game developer founded by Toshihiro Nagoshi — the creator of the Yakuza series — has officially been dissolved, according to Japan’s Official Gazette, Kanpo, published on November 2, 2026. The dissolution followed a shareholders’ resolution on October 31, 2026, as reported by Automaton West and confirmed by Engadget. The company had no games released during its existence. NetEase Games, the company that backed Nagoshi Studio, cut its funding in March 2026, as reported by Bloomberg. At that time, NetEase cited a need for an additional ¥7 billion ($44 million) to complete the game. Despite attempts by Nagoshi to find new investors, no buyer or new publisher has been confirmed, according to Engadget. The liquidation process is now underway, with Minoru Morinaga named as the representative liquidator in the official notice. This timeline is calculated from the publication date and is not explicitly stated in the sources. Nagoshi Studio was founded in November 2021, after Nagoshi left Ryu Ga Gotoku Studio, the Sega team behind the Yakuza series. It operated for just under five years, with no games shipped.

Technology: Pearls and Bird Feathers Inspire New Way to Make Long-Lasting Colors

confirmed

Colors in nature aren’t always made with dyes—pearls, bird feathers, butterfly wings, and opals get their shine from tiny structures that bend and reflect light, a phenomenon known as structural color. That’s the inspiration behind a new discovery by a team led by Professor Shu Yin at Tohoku University, working with researchers from Osaka University, National Taipei University of Technology, the University of Science and Technology Beijing, and Daito Kasei Kogyo Co., Ltd. The team developed a simpler way to produce structural colors, avoiding the need for precisely arranged microscopic patterns that are expensive and hard to make. Instead, they used a layered structure similar to pearls, made from cerium carbonate hydrate, which naturally forms thin, irregular layers that reflect light in soft, shifting ways. As light bounces between these uneven layers, it creates a pearlescent effect. To make the colors pop, they added light-absorbing materials like iron oxyhydroxide to the surface. These materials soak up certain wavelengths, letting other colors stand out more clearly—allowing the team to create red, blue, purple, and green hues just by adjusting the type and amount of absorber used. To make the materials tougher and more stable, they heated them, turning the cerium carbonate hydrate into cerium oxide and the iron oxyhydroxide into iron oxide. Even after heating, the layered structure held up, keeping its shimmer and color. The research was published in Advanced Materials on September 22, 2026. The team tested their creation by making colorful artwork, applying it to plastics, and even using it on human skin to explore its use in cosmetics. As of Monday November 02, 12:37 Texas time, the findings are confirmed by Phys.org and the original research team. Professor Yin says the breakthrough is just the start—now the focus is on how these materials can be used in everyday life.

Crypto: Binance Reimburses Most Stolen Funds After Record $6.3 Billion Hack

confirmed

As of Monday November 02, 12:37 Texas time, Binance confirmed it has replaced roughly 95% of the $6.3 billion stolen in the October 2026 hack, with the remaining 5% still under recovery, according to Bloomberg. The FBI has linked the attack to North Korean hackers, as reported by The Register. In response, U.S. investigators are urging exchanges to freeze accounts tied to the theft, and Gate has already frozen two linked accounts, according to Cointelegraph. Meanwhile, 80 million XRP—worth about $100.9 million—were moved from a wallet connected to the hack, according to U.Today. Despite the breach, Binance says customer deposits remain secure, and withdrawals have resumed, as confirmed by WSJ Markets. The exchange also noted that holders of the top 10 major assets on its platform can personally verify their balances are backed at least one-to-one, according to another outlet. Binance co-founder Yi He denied rumors of an engineer's romance with a North Korean agent, calling the story "dramatic, but not true," as reported by TASS and Kommersant. The hack has had ripple effects across markets. US spot Bitcoin ETFs saw their largest daily outflow in four months, shedding $643 million on Friday, according to The Block. Meanwhile, Bloomberg notes that the frantic attempts by hackers to liquidate stolen funds created a brief windfall for fast-moving traders who capitalized on poor execution, with attackers reportedly losing about $119 million due to rushed trades, as estimated by Bitquery. Crypto hack losses in 2026 have now reached $8.74 billion, more than triple the $2.51 billion lost in 2025, according to Coinspeaker. However, the overall year has been quieter than expected without the Binance incident, despite the massive scale of this single event.

Energy: U.S. Turns to AI and New Alloys to Catch Up in Nuclear Race

confirmed

As of Monday November 02, 12:37 Texas time, the United States is redirecting its focus in the global tech and energy race from out-mining China to accelerating innovation in materials engineering, waste recovery, and recycling, with $10 billion in federal investment planned from January 2025 to June 2026. Researchers at the Pacific Northwest National Laboratory have developed a new alloy called V555 using artificial intelligence, capable of withstanding 600 megapascals of stress, which could speed up the development of next-generation nuclear materials. China continues to hold 91% of global rare earth refining capacity and uses export controls as leverage, while also advancing its own nuclear and semiconductor technologies. The U.S. has awarded up to $50 million in federal funding to eight nuclear fuel projects, including research into transuranic (TRU) fuel, as part of a Department of Energy program. Meanwhile, China conducted a test launch of an unarmed, nuclear-capable ballistic missile into the Pacific Ocean, which the U.S. monitored from a submarine and expressed concern over, calling Beijing's rapid and opaque nuclear buildup a threat to regional and global stability. The U.S. continues to urge China to engage in arms control and adopt standardized notification practices for long-range missile and space launches.

Science: NASA's Mars Simulation Crew Completes 378-Day Isolation Mission

confirmed

The crew of NASA's simulated Mars mission, known as CHAPEA, stepped out of their 3D-printed habitat at the Johnson Space Center in Houston on October 31, 2025, after spending 378 days in isolation. As of Monday November 02, 12:37 Texas time, the mission has officially ended. The four crew members — Ross

Elder, Ellen Ellis, Matthew Montgomery, and James Spicer — lived in a 1,700-square-foot habitat, growing crops in simulated Martian soil and communicating with NASA officials with delays up to 45 minutes, mimicking real space travel conditions. According to Reuters, Ellen Ellis, the medical officer, said it had been “a hell of a year — analog astronauts living in captivity of our own free will.” The mission was designed to help NASA understand how astronauts adapt to long-duration space travel, with the goal of keeping crews healthy and connected during future missions to Mars. The crew will now undergo two weeks of evaluations and debriefings with scientists. This was the second CHAPEA mission, following a similar 378-day test in 2023 and 2024. NASA aims to send humans to Mars as early as the 2030s, after first returning astronauts to the Moon. Meanwhile, a separate incident involving nine people adrift in the Pacific Ocean was reported by TASS. The group, from Micronesia, set out in July 2025 but were blown off course by a storm, drifting for about three months and covering roughly 5,400 km before their boat washed ashore on Fanning Island in Kiribati. Five survivors, including two children, were rescued and are receiving care, while four others remain missing. This event is unrelated to the NASA mission.

Science: FAA Orders New Inspections on Boeing 787 and 747 Jets Over Fuel Tank Concerns

confirmed

As of Monday November 02, 12:37 Texas time, the Federal Aviation Administration has issued a new airworthiness directive for Boeing 787-8, 787-9, and 787-10 airplanes. The order requires detailed inspections and adhesion testing of sealant in the center wing fuel tank, according to the Federal Register. This update follows a report that certain sealant installations did not receive required visual and adhesion checks during production. The FAA also issued a separate directive that supersedes an earlier rule for Boeing 747-400 and -8 series planes, addressing wear in transfer pump components of the horizontal stabilizer fuel tank and limiting the use of affected parts. The action was prompted by further steps taken by Boeing.

Science: Early Humans Needed More Than Water to Settle Ancient Arabia

confirmed

This challenges old ideas that people only moved to places with easy access to water. The study shows that 57% of the water-accessible land lacked suitable stone for making tools, meaning raw-material geology played a key role in where humans could settle. This finding revises earlier migration models that assumed water was the main factor in habitability. As of Monday November 02, 12:37 Texas time, this conclusion is confirmed by Science Magazine and Phys.org.

Science Magazine (MBFC: pro-science bias, very-high factual reporting)

Science: Smart Window Uses Silver Shield to Block Heat While Staying Clear

confirmed

Researchers have developed a smart window that uses a voltage-activated silver layer to reflect harmful near-infrared sunlight, keeping interiors cooler. As of Monday November 02, 12:37 Texas time, tests in Shanghai showed the prototype reduced indoor temperatures by up to 7°C compared to standard glass. The window stays partially transparent while blocking heat, with visible light transmission dropping from 44% to below 5%, and near-infrared reflection rising from 54% to 83%. A silicone coating on the surface helps emit

trapped heat outward, making it especially effective for skylights. The design also creates colored tints—yellow, cyan, and rose red—due to light interference effects. While the technology manages daylight, privacy, and thermal control all at once, its long-term durability has not yet been proven. The innovation builds on decades of research into smart windows, which were first conceptualized in the 1980s and are now moving beyond labs into real-world use. As reported by Phys.org and News Minimalist, this advancement could help reduce energy use in buildings, where windows are responsible for a significant portion of heating and cooling demands.

Wellbeing: FDA Approves Cheap Generic HIV Prevention Shot for 120 Countries

confirmed

The U.S. Food and Drug Administration has granted a preliminary approval to Dr. Reddy’s Laboratories for a generic version of lenacapavir, the only HIV prevention injection that needs to be given just twice a year. As of Monday November 02, 12:37 Texas time, this approval marks a key step toward making the drug available in 120 low- and middle-income countries. Unitaid, a global health organization, called the move “an extraordinary advance for global health.” The approval was announced by AP News, which reported the decision as a major milestone for expanding HIV prevention in regions hardest hit by the epidemic. El Nuevo Día in Puerto Rico confirmed the FDA’s approval of the affordable version of the HIV prevention injection, noting its annual cost of $40 per person in eligible countries. Franceinfo described the development as “an extraordinary advance for global health,” highlighting that the drug will be available in 120 countries at $40 per person per year, with two injections required annually. El Universo from Ecuador confirmed the FDA’s approval of the generic version of the semestral HIV prevention injection, stating it will cost $40 per patient annually in the 120 countries where it will be distributed. CartaCapital in Brazil reported that the U.S. approval was announced by Dr. Reddy’s Laboratories, the Indian pharmaceutical company behind the generic version. Montevideo Portal in Uruguay noted the U.S. approval of a generic version of the semi-annual HIV prevention injection, and added that Dr. Reddy’s received a preliminary FDA authorization to produce the more affordable lenacapavir. Asharq Al-Awsat in Saudi Arabia reported that the U.S. approval paves the way for the HIV prevention injection to be made available in 120 countries at a yearly cost of $40 per person. Der Standard in Austria confirmed the FDA’s preliminary approval of the generic form of lenacapavir, noting it will be available in 120 countries for about €36 per year.
